PROFESSIONAL SUMMARY

Game Development student at Full Sail University with experience developing object-oriented applications using C++. Experienced with problem-solving, debugging, input validation, Git version control, and iterative software development. Interested in both the technical and creative aspects of game development, with a particular interest in interactive storytelling and narrative design.

TECHNICAL SKILLS

Programming Languages: C++

Software & Tools: Visual Studio, Git, GitHub, Microsoft Office

Technical Concepts: Object-Oriented Programming, Classes & Objects, Functions, Loops, Vectors, Input Validation, Debugging, Version Control, Branches, Pull Requests

TECHNICAL EXPERIENCE

The H.A.N.D. Experiments: Smalltown Mystery

- Developed a text-based C++ adventure game using object-oriented programming.
- Designed multiple classes to manage gameplay, players, rooms, items, and the terminal-style user interface.
- Implemented an inventory system, room navigation, item-based progression, and input validation.
- Used Git and GitHub for version control through commits, branches, issues, and pull requests.
- Tested and debugged multiple gameplay paths and refactored repeated interface code into reusable functions.
- Created technical documentation and a recorded project demonstration.

PROJECTS

The H.A.N.D. Experiments: Smalltown Mystery

Developed a text-based adventure game set inside an abandoned laboratory where the player explores different areas, collects items, examines clues, and unlocks new locations. The project demonstrates object-oriented programming, inventory management, input validation, room navigation, and progression systems.

Technologies: C++, Visual Studio, Git, GitHub

EDUCATION

Full Sail University

Bachelor of Science in Game Development

Expected Graduation: March 2028

Relevant Coursework:

- C++ Programming
- Object-Oriented Programming
- Software Development
- Version Control
